

Examples of graphs

[Help Center](#)

A graph is a collection of nodes and edges. Here are two examples. The top graph is undirected. The bottom graph is directed.

Node Neighbors

1	2
2	1, 3, 4
3	2, 4
4	2, 3
5	(none)

```
u_graph = { 1: set([2]),
            2: set([1, 3, 4]),
            3: set([2, 4]),
            4: set([2, 3]),
            5: set() }
```

Node Incident To

1	2
2	3, 4
3	(none)
4	2, 3
5	(none)

```
digraph = { 1: set([2]),
            2: set([3, 4]),
            3: set([ ]),
            4: set([3, 2]),
            5: set([ ])
```
